The project was initiated to face the rural challenges encountered by the village. It has started with a 3 days workshop with citizens attendance. As follow-up, the village has developed a long term vision with ecological innovative and social orientation so-called “Bio-Village under One Roof”. The development strategy focuses on 5 themes: village community, social cohesion, education, environment and economy.

Mayor's words

“I am not here to give advice but we try to do our best to act in collaboration with the population. I think that our village is a “smart” one. We always try to think ahead and always think about the future of the next generations.

In the commune, 80 % of the cultivated land is organic. In schools, we cook 100% organic.

We set up an organic network. We always try to provide jobs with good qualifications.”

5 themes

1. Village community – “living together”. It’s a priority and the inhabitants try to create a lively and diversified way of living.

2. Education: reinforcing the spirit of the village through the knowledge and talents.

3. Social: several generations of people live together and sets up an accessible social network for all.

4. Environment: inhabitants take care of their environment because they are aware of the beauty of the landscape and also of the actual sustainability questions. They strive for a high level of energy self-sufficiency to preserve the environment.

5. Economy: developing jobs with new economic potential and high-quality jobs (with added value).
